

AI Healthcare Assistant – Health Summary Report

Symptoms: i am having rashes,itching,fever,cough and severe headche

Severity Level: Low

Explanation:

Based on the symptoms you've provided, I'll do my best to help.

****Possible causes:****

1. Allergic reactions or skin conditions such as eczema or an allergic rash.
2. Flu (influenza) - considering fever, cough, and severe headache.
3. Heat illness or sunstroke, though unlikely given the combination of symptoms.
4. Viral exanthems (skin rashes caused by viruses like measles or chickenpox), though uncommon.

****Simple explanation:****

You've reported having rashes, itching, fever, cough, and severe headaches. These symptoms can be related to an allergic reaction, infection, or other medical conditions.

****Safe general advice:****

1. ****Rest and stay hydrated:**** Drink plenty of fluids like water, clear broths, or electrolyte-rich beverages to help your body replenish lost fluids.
2. ****Fever control:**** Use over-the-counter medications like acetaminophen or ibuprofen to help bring down your fever. Always follow the recommended dosage and consult with a healthcare professional if the fever persists or worsens.
3. ****Seek medical attention if...:**** You experience high fever (above 102°F), severe headache, difficulty breathing, or a rash that spreads or worsens. If you're concerned or unsure about your symptoms, consult a healthcare professional for guidance.
